- Nedgroup Investments Opportunity +4.30%
- Investec Opportunity +3.34%
- Foord Balanced +3.03%

Negative Contributions:

- None

PORTFOLIO ACTIONS OVER THE PAST QUARTER

None

MARKET COMMENTARY

Our portfolios had sacrificed short-term performance in the pursuit of constructing durable anti-fragile diversified portfolios that could absorb a dramatic change in the strong international equity market momentum and an appreciating ZAR over the last year. Patient investors are now rewarded as our portfolios were well positioned going into the news flow on a cabinet minister reshuffle, which caused S&P Global to downgrade SA sovereign currency rating to a 'junk' (sub-investment grade) category. This downgrade only affects 10% of SA's issued foreign currency debt and not the remaining 90% ZAR denominated debt, which is still deemed to be investment grade. Based on our Ppeer group analysis studying the effects of a sovereign downgrade as experienced in other Third World countries, we can expect the following economic knock-on effects:

Real GDP growth slows, SA budget deficit widens, continued currency depreciation, sovereign credit spreads widen, CPI Inflation and Interest rate increases and Bond Yields move higher. Some of these effects are already priced in asset prices and the level of the ZAR Rand. The real risk lies in GDP slipping into recessionary territory which can last for almost 2 years. This can cause further unemployment.

The diversified nature of our funds and portfolios are built to withstand multiple future outcomes. Our portfolios have almost zero percent exposure to SA Government Debt and are constructively exposed to domestic money market, offshore assets, commodities and SA companies with rand hedge characteristics which should protect our portfolios well in the short term, while it is currently serving producing as short-term capital gains. If/when the facts change, we will change apply our minds to them, then react in a composed and measured manner
